

Action Day – February 1st 2014

Report by Robert Briggs

Our February morning meeting was a bright clear and sunny, due to the very wet and flooded ground conditions caused by the wettest January since records had been kept we were limited to the type of work we could safely undertake.

With 8 helpers we spent time litter picking around the two ponds and surrounding common land.

We also unlocked the gate to Black Well to remove all the litter and cleared away the ivy and small saplings that had started to grow from inside the well. A general tidy with some pruning around Foundry pond was also undertaken.
